

4 WEEKS PREGNANT

BLEEDING AT 4 WEEKS

BABY AT 4 WEEKS

At this time, your baby is a group of cells called a blastocyst. The blastocyst would become an embryo this week. It is so small, microscopic, or 0.2 mm.

CAUSES OF BLEEDING

- Implantation Bleeding
- Vaginal Infection
- Chemical Pregnancy
- Beginning of a Miscarriage or a Threatened Miscarriage
- Ectopic Pregnancy

WHEN SHOULD I SEE A DOCTOR

If your bleeding is heavier than just spotting and it is accompanied by cramping or abdominal pain, you should contact a doctor. If the bleeding is just spotting but has not stopped within a few days, contact a doctor. Also, if the blood is too heavy bleeding in early pregnancy 4 weeks or your passing blood clots in early pregnancy 4 weeks, contact a doctor.

THERE ARE PLENTY OF WAYS TO HELP!
